1. A hard surface, all weather road **[#934]** runs from Sighisova westward to Archita. From Archita the hard surface, all weather road **[#934]** runs to Brasov. The road is over two lanes wide and has a good solid foundation.
2. This road is considered to be a first class highway in Romania and is constructed for heavy usage. The terrain through which this road runs is hilly. The road is asphalt surfaced. The road is maintained occasionally by assigned work crews.
3. A number of loose surface, dry weather dirt roads **[#935-A]** run in the vicinity of Saschis, Cloasterf and Vamtorf. The dirt roads are over one lane in width and are considered to be first class principal dirt roads. Because of the mountainous terrain the dirt roads have a natural foundation of rock, gravel and sand. Occasionally the roads are able to bear heavy usage both in summer and in winter when the ground is hard and solid. However, whenever it rains the dirt roads become rutted and potholed. When this occurs it is easier for the traveler to get off the road and drive alongside the dirt road. There are no drainage ditches running alongside the dirt roads.
4. A number of loose surface, dry weather, secondary dirt roads **[#935-B]** run in the same vicinity as the principal dirt roads. The secondary roads are also over one lane in width and occasionally are able to bear heavy usage. Farmers and villagers maintain the dirt roads.
